

More on momentum resolution...

Tried looking at isolated muon sample:

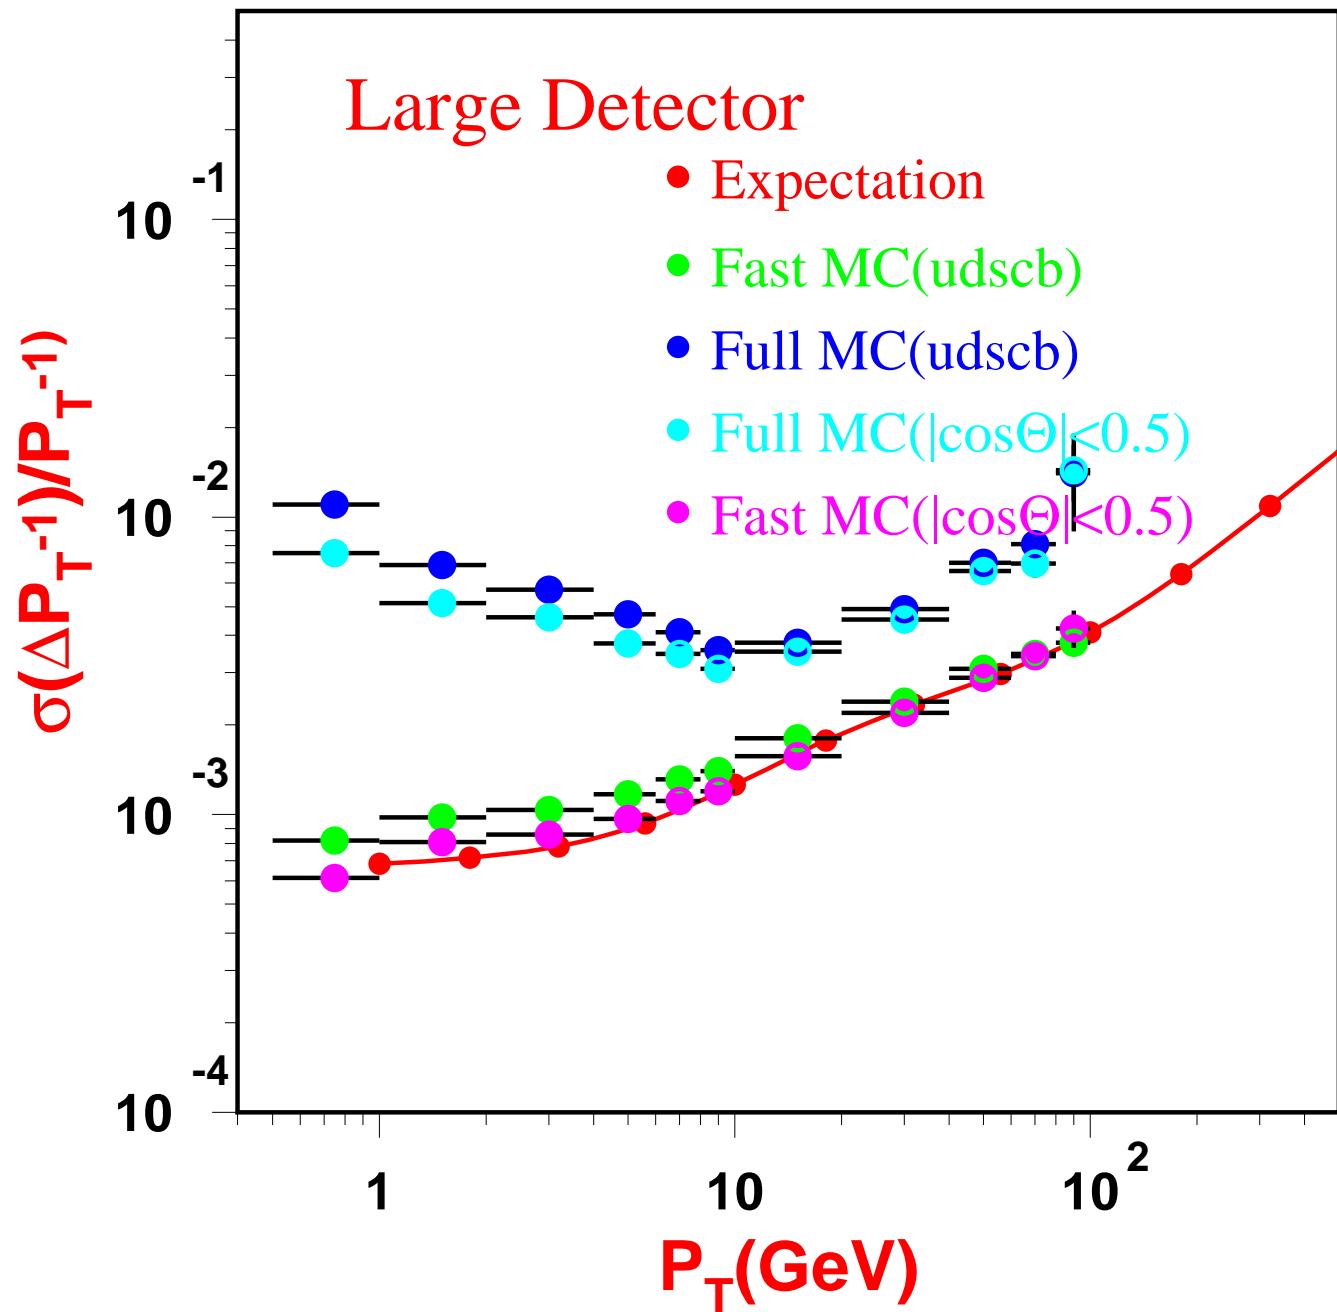

⇒ Evidence for track confusion in jets?

More on momentum resolution...

What about $\cos(\theta)$ dependence?

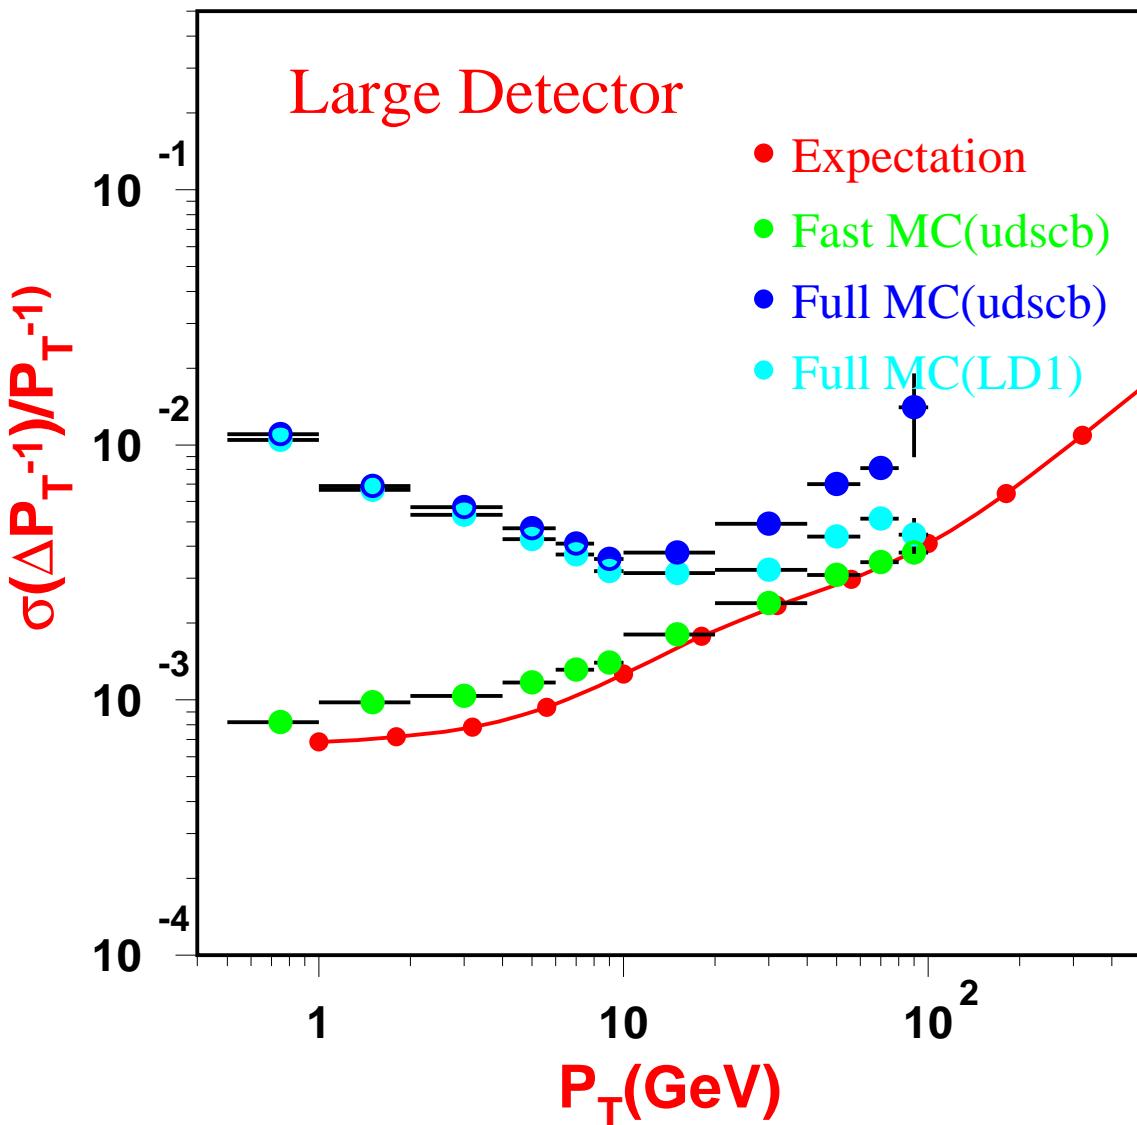

(No disks below $|\cos(\theta)| = 0.5$)

⇒ Intermediate tracking layer included in full reconstruction?

More on momentum resolution...

A quick look at LD-MAR01:

Changes

- TPC $\sigma_{r-\phi}$: “ $140 \mu\text{m}$ ” $\equiv 100 \mu\text{m} \Rightarrow 100 \mu\text{m}$
- CCD $\sigma_{r-\phi}$ and σ_{r-z} : $10 \mu\text{m} \Rightarrow 5 \mu\text{m}$
