

Generic Hit Formats

Norman A. Graf

SLAC

December 11, 2001

Problem Statement

- ❖ We wish to define a generic output hit format for full simulations of the response of detector elements to physics events.
- ❖ Want to preserve the “true” Monte Carlo track information for later comparisons.
- ❖ Want to defer digitisation as much as possible to allow various resolutions, etc. to be efficiently studied.

Types of Hits

❖ “Tracker” Hits

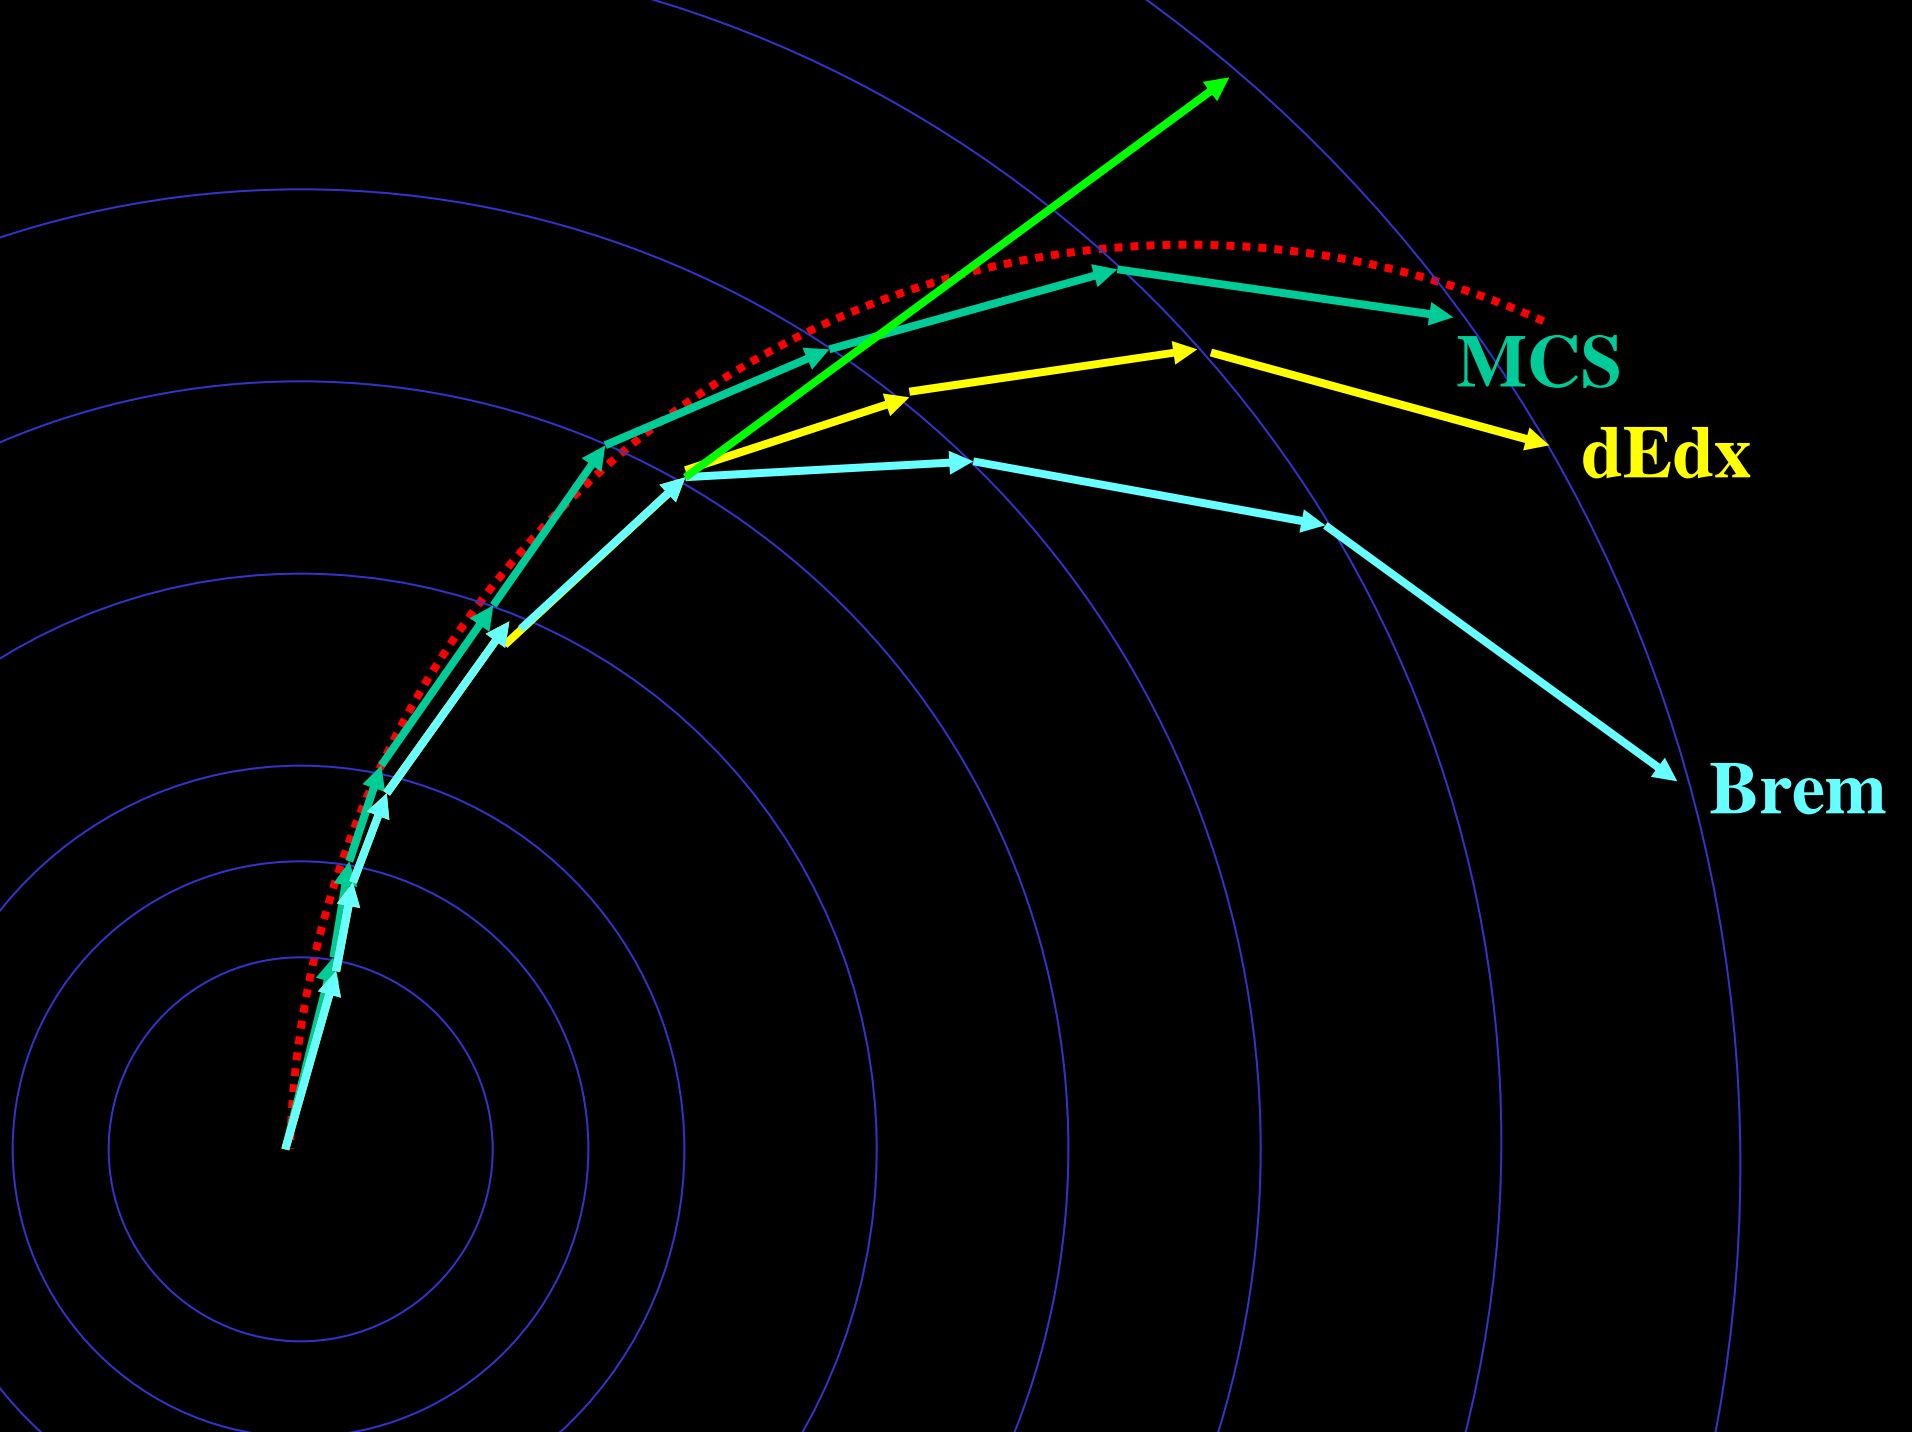

- Position sensitive.
- Particle unperturbed by measurement.
- Save “ideal” hit information.

❖ “Calorimeter” Hits

- Energy sensitive.
- Enormous number of particles in shower precludes saving of each “ideal” hit.
- Quantization necessary at simulation level.

Track Definition

- ❖ **Particles suffer various indignities while traversing the detector.**
- ❖ **Knowing track parameters at a single point (*e.g.* the point of generation) is insufficient for precision fits due to material effects (dE/dx , MCS, bremsstrahlung) and field inhomogeneities.**
 - **No global functional form for the fit.**
- ❖ **Store track information at each hit.**

"Tracker Hit"

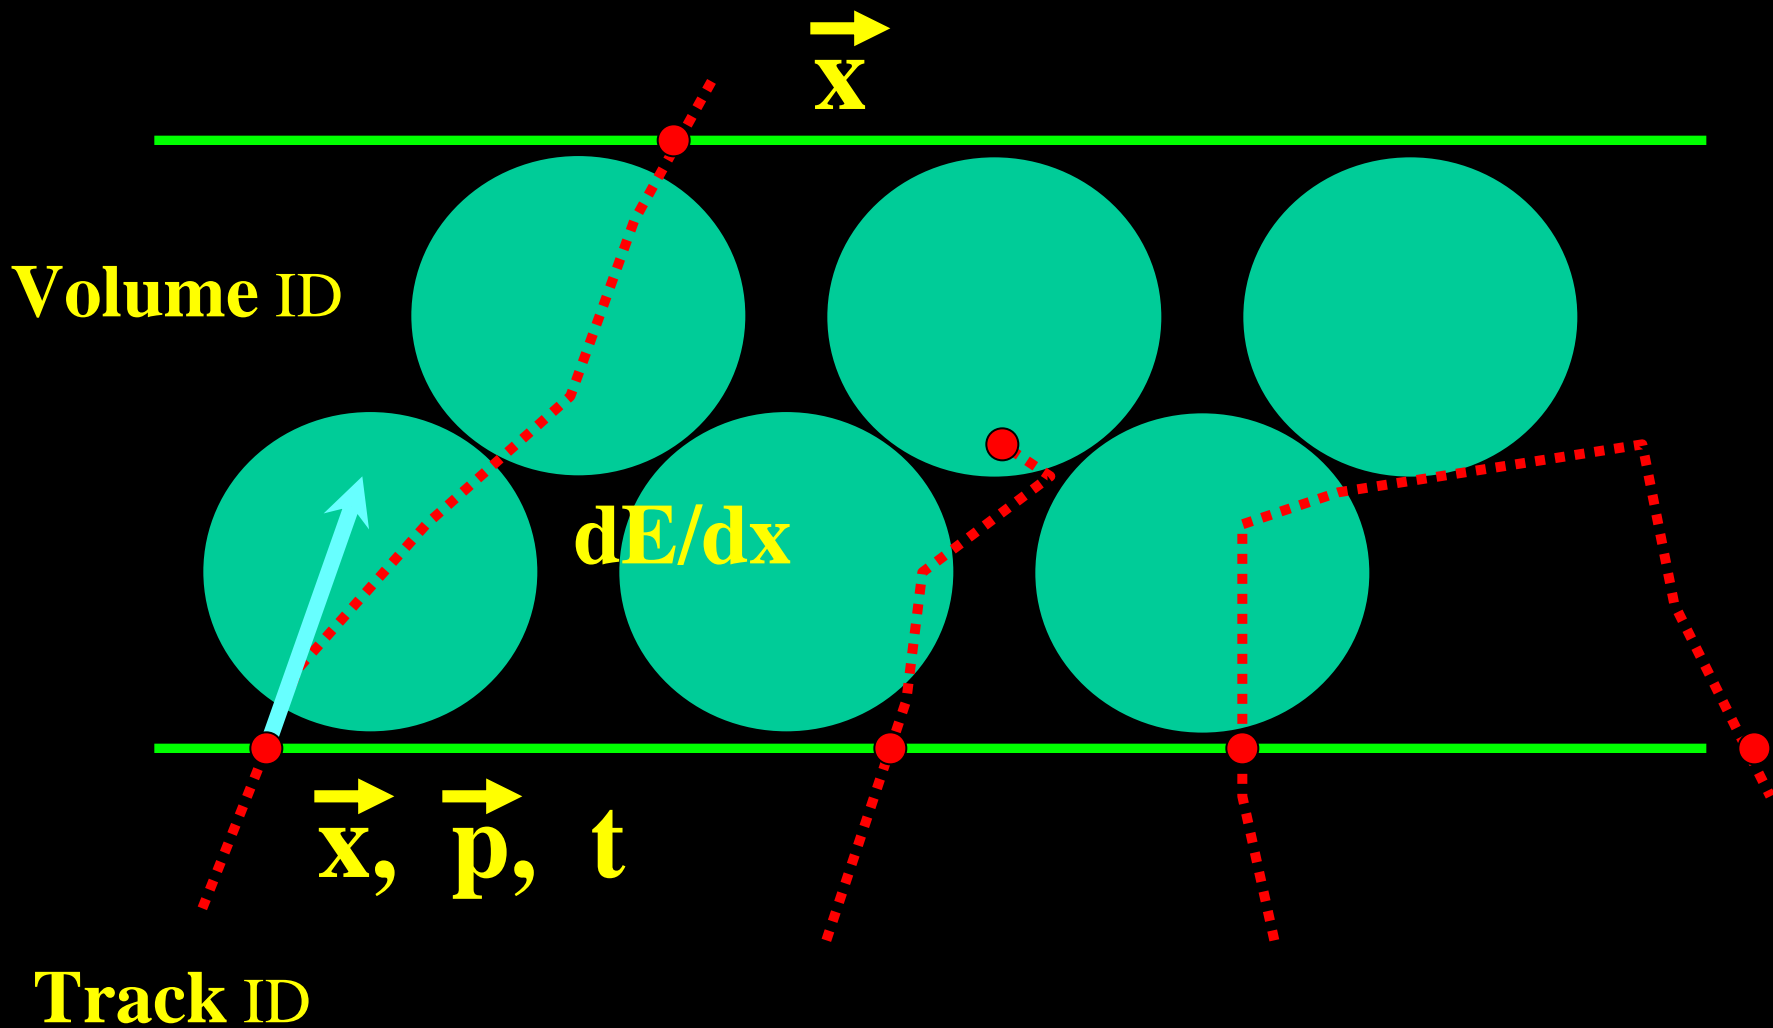

- ❖ MC Track Number
- ❖ Encoded detector ID (encoding is detector dependent)
- ❖ Global hit position at entrance to sensitive volume
- ❖ Global hit position at exit of sensitive volume
- ❖ Track momentum at entrance to sensitive volume
- ❖ Energy deposited by track in sensitive volume
- ❖ Time of track's crossing

- ❖ Hit number
- ❖ Local hit position at entrance to sensitive volume
- ❖ Local hit position at exit of sensitive volume
- ❖ Step size used by simulator in sensitive volume

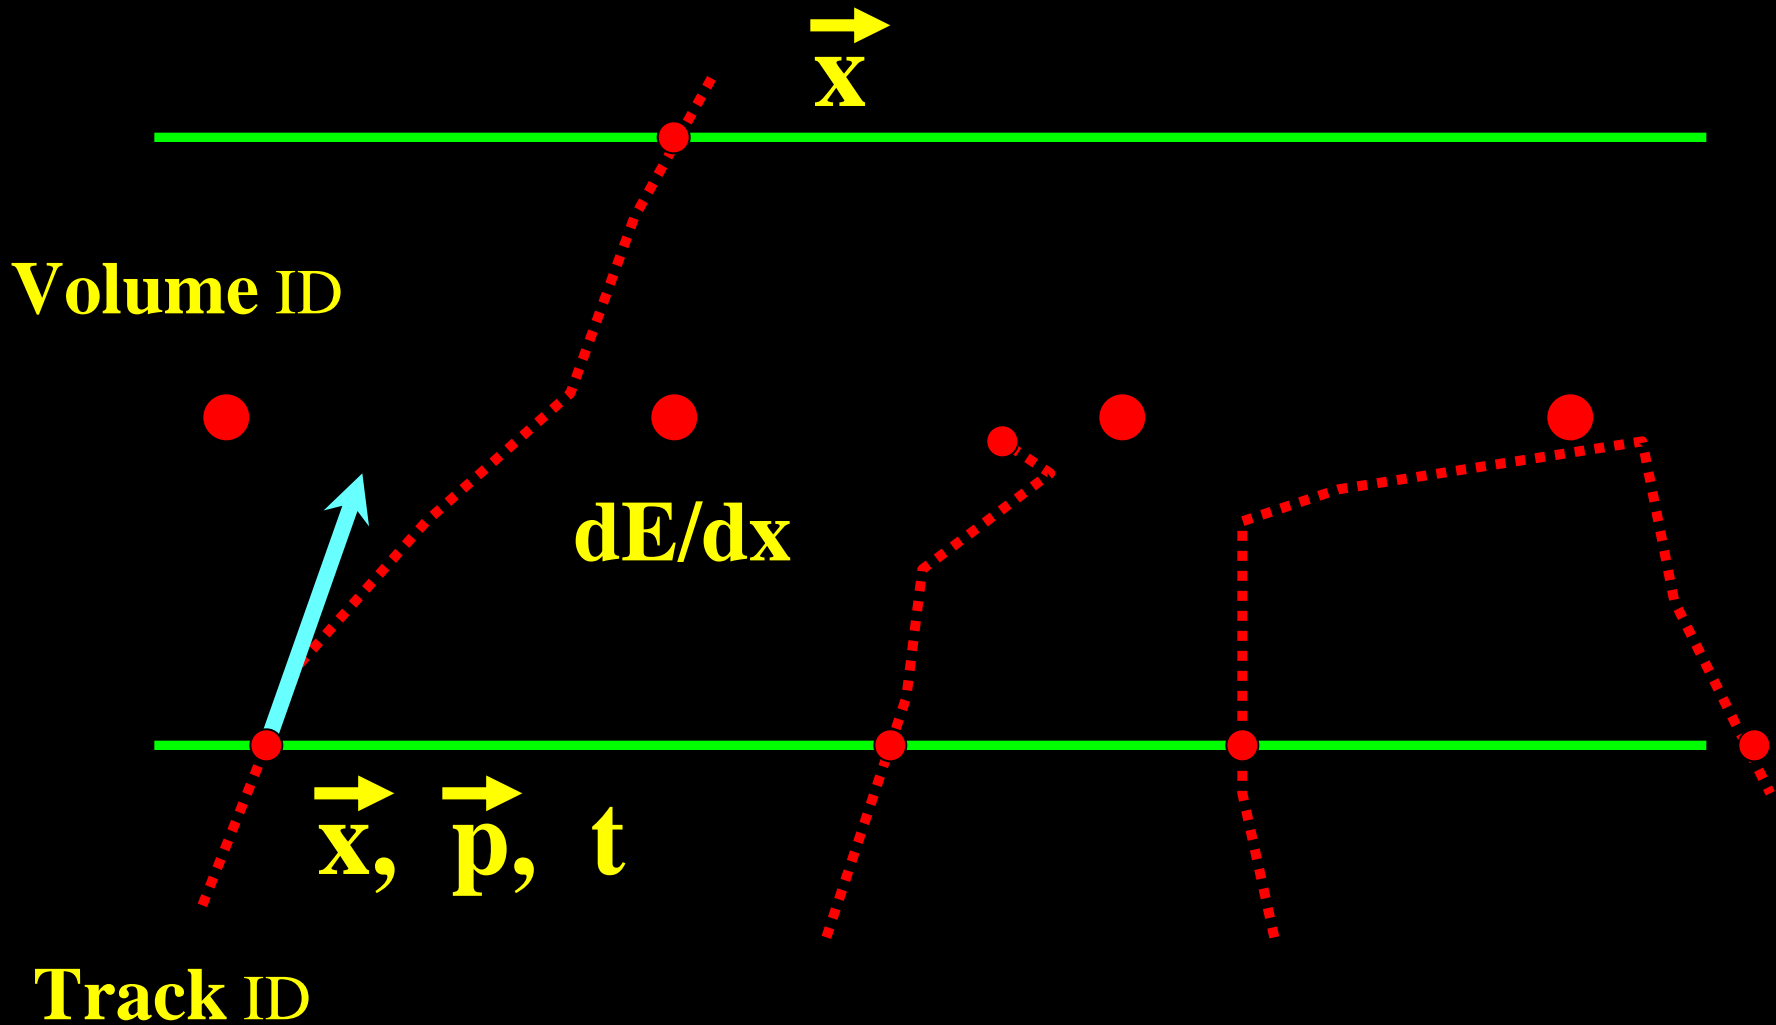

Digitization

Sci-Fi Digitization

Drift Chamber Digitization

Pixel Digitization

Calorimeter Hit

- ❖ **Encoded detector ID (encoding is detector dependent)**
- ❖ **MC ID and energy deposited by each contributing particle**

- ❖ **Hit Number**
- ❖ **Cell position**
 - **Radius, Phi, Z of cell**
 - **X, Y, Z of cell**
- ❖ **Total energy deposited in cell**

Summary

- ❖ **Storing “ideal” hits gives detailed information about MC track.**
- ❖ **Deferring digitisation allows studies of detector resolution to be efficiently conducted.**
- ❖ **Can approximate the same in calorimeter by defining small cells, then ganging later.**
- ❖ **Aim to have GEANT4 with SIO persistence implementation early next year.**
