## 2000 Linear Collider Physics Report

<b>“The Case for a 500 GeV <math>e^+e^-</math> Linear Collider”</b>	<b>7</b>
1 Introduction . . . . .	7
2 Lepton colliders and the long-term future of high energy physics . . .	10
2.1 A 20-year goal for high energy physics . . . . .	10
2.2 A 20-year program for accelerators . . . . .	12
3 Parameters of a 500 GeV linear collider . . . . .	14
4 Why we expect new physics below 500 GeV . . . . .	16
4.1 A fundamental versus composite Higgs boson . . . . .	17
4.2 A fundamental Higgs boson should be light . . . . .	20
4.3 The constraint on the Higgs mass from precision electroweak data . . . . .	21
4.4 The lightest supersymmetry partners are likely to appear at 500 GeV . . . . .	22
4.5 What if there is no fundamental Higgs boson? . . . . .	24
4.6 What if the LHC sees no new physics? . . . . .	26
5 Physics at a 500 GeV linear collider . . . . .	27
5.1 Study of the Higgs boson . . . . .	29
5.2 Studies of supersymmetry . . . . .	37
5.3 Studies of the top quark . . . . .	47
5.4 Studies of $W$ boson couplings . . . . .	49
5.5 Studies of QCD . . . . .	51
5.6 Precision electroweak studies . . . . .	52
6 Further topics from the linear collider physics program . . . . .	53
6.1 Extended Higgs sector . . . . .	54
6.2 Supersymmetric particle studies . . . . .	56
6.3 New $Z'$ bosons . . . . .	58

6.4	Large extra dimensions . . . . .	59
7	Conclusions . . . . .	61

# Sourcebook for Linear Collider Physics

<b>Higgs Bosons at the Linear Collider</b>		<b>73</b>
1	Introduction . . . . .	73
2	Expectations for electroweak symmetry breaking . . . . .	75
3	The Standard Model Higgs boson—theory . . . . .	79
	3.1 Standard Model Higgs boson decay modes . . . . .	79
	3.2 Standard Model Higgs boson production at the LC . . . . .	80
4	SM Higgs searches before the linear collider . . . . .	83
	4.1 Direct search limits from LEP . . . . .	83
	4.2 Implications of precision electroweak measurements . . . . .	83
	4.3 Expectations for Tevatron searches . . . . .	84
	4.4 Expectations for LHC searches . . . . .	86
5	Higgs bosons in low-energy supersymmetry . . . . .	88
	5.1 MSSM Higgs sector at tree-level . . . . .	89
	5.2 The radiatively corrected MSSM Higgs sector . . . . .	90
	5.3 MSSM Higgs boson decay modes . . . . .	95
	5.4 MSSM Higgs boson production at the LC . . . . .	96
6	MSSM Higgs boson searches before the LC . . . . .	97
	6.1 Review of direct search limits . . . . .	97
	6.2 MSSM Higgs searches at the Tevatron . . . . .	98
	6.3 MSSM Higgs searches at the LHC . . . . .	99
7	Non-exotic extended Higgs sectors . . . . .	102
	7.1 The decoupling limit . . . . .	103
	7.2 Constraints from precision electroweak data and LC implications	103
	7.3 Constraints on Higgs bosons with $VV$ coupling . . . . .	105
	7.4 Detection of non-exotic extended Higgs sector scalars at the Tevatron and LHC . . . . .	106
	7.5 LC production mechanisms for non-exotic extended Higgs sec- tor scalars . . . . .	107
8	Measurements of Higgs boson properties at the LC . . . . .	109
	8.1 Mass . . . . .	109
	8.2 Coupling determinations—light Higgs bosons . . . . .	112
	8.3 Coupling determinations—intermediate mass Higgs bosons . .	117
	8.4 Coupling determinations—heavy Higgs bosons . . . . .	119
	8.5 Summary of couplings . . . . .	120
	8.6 Total width . . . . .	121
	8.7 Quantum numbers . . . . .	121

8.8	Precision studies of non-SM-like Higgs bosons . . . . .	124
9	The Giga-Z option—implications for the Higgs sector . . . . .	124
9.1	The MSSM context . . . . .	125
9.2	Non-exotic extended Higgs sector context . . . . .	126
10	The $\gamma\gamma$ collider option . . . . .	127
11	Exotic Higgs sectors and other possibilities . . . . .	130
11.1	A triplet Higgs sector . . . . .	130
11.2	Pseudo Nambu Goldstone bosons . . . . .	131
<b>Supersymmetry Studies at the Linear Collider</b>		<b>141</b>
1	Introduction . . . . .	141
2	The scale of supersymmetry . . . . .	142
2.1	Naturalness . . . . .	142
2.2	Neutralino relic abundance . . . . .	145
2.3	Higgs mass and precision electroweak constraints . . . . .	146
2.4	Evidence for new physics . . . . .	146
3	Determination of masses and couplings . . . . .	148
3.1	Measurement of superpartner masses . . . . .	148
3.2	Measurement of supersymmetry parameters . . . . .	153
4	Tests of supersymmetry . . . . .	155
4.1	Confirming supersymmetry . . . . .	156
4.2	Super-oblique corrections . . . . .	156
4.3	Measurements at linear colliders . . . . .	157
5	Symmetry violating phenomena . . . . .	159
5.1	R-parity violation . . . . .	159
5.2	Lepton flavor violation . . . . .	162
5.3	CP violation . . . . .	163
6	Supersymmetry and $e^-e^-$ , $e^-\gamma$ , and $\gamma\gamma$ colliders . . . . .	166
6.1	Supersymmetry and $e^-e^-$ colliders . . . . .	166
6.2	Supersymmetry and $e^-\gamma$ colliders . . . . .	168
6.3	Supersymmetry at $\gamma\gamma$ colliders . . . . .	168
7	Comparison with LHC . . . . .	169
<b>New Physics at the TeV Scale and Beyond</b>		<b>185</b>
1	Introduction . . . . .	185
2	Gauge boson self-couplings . . . . .	187
2.1	Triple gauge boson coupling overview . . . . .	187
2.2	Triple gauge boson measurements . . . . .	188
2.3	Electroweak radiative corrections to $e^+e^- \rightarrow 4$ fermions . . . . .	191
2.4	Quartic gauge boson couplings . . . . .	193
3	Strongly coupled theories . . . . .	195

3.1	Strong $WW$ scattering and technicolor . . . . .	195
3.2	Composite Higgs models . . . . .	198
4	Contact interactions and compositeness . . . . .	201
5	New particles in extended gauge sectors and GUTs . . . . .	202
5.1	Extended gauge sectors . . . . .	202
5.2	Leptoquarks . . . . .	208
5.3	Exotic fermions . . . . .	209
6	Extra dimensions . . . . .	210
6.1	Large extra dimensions . . . . .	212
6.2	Localized gravity . . . . .	218
6.3	TeV-scale extra dimensions . . . . .	222
7	Highly non-conventional theories and possible surprises . . . . .	225
7.1	String resonances . . . . .	225
7.2	Non-commutative field theories . . . . .	226
8	Determining the origin of new physics . . . . .	228
9	Conclusions . . . . .	230
<b>Top Quark Physics</b>		<b>239</b>
1	Introduction . . . . .	239
2	Physics in the threshold region . . . . .	239
2.1	Introduction . . . . .	239
2.2	QCD dynamics and cross section . . . . .	239
2.3	Top width . . . . .	241
2.4	Top quark Yukawa coupling . . . . .	241
2.5	Experimental issues . . . . .	242
3	Physics above the top threshold . . . . .	242
3.1	Determination of the top quark–Higgs Yukawa coupling . . . . .	242
3.2	Top mass reconstruction . . . . .	245
3.3	Anomalous couplings . . . . .	247
3.4	QCD and electroweak radiative corrections . . . . .	248
4	Conclusions . . . . .	251
<b>QCD and Two-Photon Physics</b>		<b>255</b>
1	Introduction . . . . .	255
2	QCD from annihilation processes . . . . .	255
2.1	The precise determination of $\alpha_s$ . . . . .	255
2.2	$Q^2$ evolution of $\alpha_s$ . . . . .	257
2.3	Top quark strong moments . . . . .	259
3	Two-photon physics . . . . .	260
3.1	Experimental requirements . . . . .	261
3.2	Bremsstrahlung photon beam . . . . .	261

3.3	Photon structure . . . . .	262
3.4	$\gamma\gamma$ scattering—total cross section . . . . .	264
3.5	$\gamma^*\gamma^*$ scattering—QCD dynamics . . . . .	265
3.6	Summary of two-photon physics . . . . .	268
4	Overall summary and conclusions . . . . .	268

**Precision Studies at the  $Z$  and the  $WW$  Threshold 271**

1	Electroweak observables on the $Z$ resonance . . . . .	271
1.1	Machine issues . . . . .	272
1.2	Electroweak observables . . . . .	273
2	$m_W$ from $WW$ threshold running . . . . .	277
2.1	$m_W$ from a polarized threshold scan . . . . .	278
2.2	Conclusion . . . . .	279
3	Electroweak tests of the Standard Model . . . . .	279
3.1	Parameterizations of deviations from the Standard Model . . . . .	282
3.2	Tests of supersymmetry . . . . .	284
4	Heavy flavor physics . . . . .	286
4.1	Measurement prospects for $\mathcal{B}(B \rightarrow \pi^0\pi^0)$ . . . . .	287
4.2	$B \rightarrow X_q\nu\bar{\nu}$ . . . . .	288
4.3	Semileptonic $B_s$ decays . . . . .	288
4.4	Weak decays of polarized beauty baryons . . . . .	289
5	Summary . . . . .	291

# Pathways Beyond the Standard Model

**Pathways Beyond the Standard Model 299**

1	Introduction . . . . .	299
2	Beyond the Standard Model . . . . .	300
3	Supersymmetry . . . . .	301
4	New strong interactions at the TeV scale . . . . .	305
4.1	Composite Higgs models . . . . .	306
4.2	Technicolor theories . . . . .	307
5	Extra spatial dimensions . . . . .	309
5.1	Flat extra dimensions, containing only gravity . . . . .	310
5.2	Warped extra dimensions, containing only gravity . . . . .	311
5.3	Flat extra dimensions, containing SM gauge fields . . . . .	311
5.4	Flat extra dimensions, containing all SM particles . . . . .	311
6	Surprises . . . . .	312

# Experimental Program Issues

<b>Scenarios for Linear Collider Running</b>	<b>315</b>
1 Preliminaries . . . . .	315
2 Illustrative scenarios . . . . .	317
2.1 A Higgs boson, but no other new physics, is seen at the LHC .	317
2.2 No Higgs boson or other new particles are seen at the LHC . .	318
2.3 Light Higgs and superpartners are seen at the LHC . . . . .	318
<b>Interaction Regions</b>	<b>321</b>
1 Introduction . . . . .	321
2 The two interaction region design at TESLA . . . . .	322
3 The dual-energy interaction region design at the NLC . . . . .	322
3.1 The low-energy interaction region at the NLC . . . . .	326
3.2 The high-energy interaction region at the NLC . . . . .	329
3.3 Alternative interaction region scenarios . . . . .	330
3.4 Simultaneous operation . . . . .	332
<b>Positron Polarization</b>	<b>333</b>
1 Introduction . . . . .	333
2 The physics perspective . . . . .	334
2.1 The structure of electroweak interactions at high energies . . .	334
2.2 Standard Model-like Higgs boson . . . . .	336
2.3 Supersymmetric particle production . . . . .	337
2.4 Some other new physics . . . . .	339
2.5 Transverse polarization . . . . .	339
3 Experimental issues . . . . .	340
3.1 Polarimetry . . . . .	340
3.2 Frequency of spin flips . . . . .	341
3.3 Run time strategy for LL, LR, RL, RR . . . . .	341
4 Sources of polarized positrons . . . . .	341
4.1 Helical undulator . . . . .	342
4.2 Backscattered laser . . . . .	343
5 Conclusions . . . . .	343
<b>Photon Collider</b>	<b>347</b>
1 Introduction . . . . .	347
2 Physics Studies at a $\gamma\gamma$ Collider . . . . .	348
2.1 Production of Higgs bosons . . . . .	348
2.2 Supersymmetric particle production . . . . .	349
2.3 $\gamma\gamma \rightarrow W^+W^-$ and $\gamma e \rightarrow W\nu$ . . . . .	350

2.4	$\gamma\gamma \rightarrow t\bar{t}$ . . . . .	351
2.5	Other processes . . . . .	352
3	Compton Backscattering for $\gamma\gamma$ Collisions . . . . .	352
3.1	Introduction . . . . .	352
3.2	Photon spectra . . . . .	352
3.3	Interaction region design and backgrounds . . . . .	357
4	IR optical system . . . . .	357
4.1	Optics design . . . . .	357
4.2	Beam pipe modifications . . . . .	358
5	Laser system . . . . .	359
5.1	Requirements and overview . . . . .	359
5.2	Laser system front end . . . . .	359
5.3	Mercury amplifier . . . . .	361
5.4	Multiplexer and beam transport . . . . .	363

## Detectors for the Linear Collider

<b>Detectors for the Linear Collider</b>		<b>379</b>
1	Introduction . . . . .	379
2	Interaction region issues for the detector . . . . .	379
2.1	Time structure. . . . .	379
2.2	IR layout . . . . .	380
2.3	Small spot size issues . . . . .	382
2.4	The beam-beam interaction . . . . .	382
3	Subsystem considerations . . . . .	385

3.1	Vertex detector . . . . .	385
3.2	Tracking . . . . .	387
3.3	Calorimetry . . . . .	388
3.4	Muon detection . . . . .	392
3.5	Solenoid . . . . .	394
3.6	Particle ID . . . . .	394
3.7	Electronics and data acquisition . . . . .	395
4	Detectors . . . . .	397
4.1	L detector for the high-energy IR . . . . .	397
4.2	SD detector for the high energy IR . . . . .	404
4.3	P detector for the lower-energy IR . . . . .	409
4.4	Cost estimates . . . . .	412

## Questions for Further Study

<b>Suggested Study Questions on LC Physics and Experimentation</b>		<b>417</b>
1	Physics issues . . . . .	417
1.1	Higgs physics . . . . .	417
1.2	Supersymmetry . . . . .	418
1.3	New physics at the TeV scale . . . . .	419
1.4	Top quark physics . . . . .	419
1.5	QCD and two-photon physics . . . . .	420
1.6	Precision electroweak measurements . . . . .	420
2	Accelerator issues . . . . .	421
2.1	Running scenarios . . . . .	421
2.2	Machine configuration . . . . .	421
2.3	Positron polarization . . . . .	422
2.4	Photon collider . . . . .	422
2.5	$e^-e^-$ . . . . .	423
2.6	Fixed Target . . . . .	423
3	Detector issues . . . . .	423
3.1	Detectors . . . . .	423
